DETAILED ACTION

Election/ Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20, drawn to a device/method of pacing a heart chamber synchronously, classified in class 607, subclass 009.
 - II. Claims 21-24, drawn to a method of pacing a heart chamber asynchronously, classified in class 607, subclass 009.

The inventions are distinct, each from the other because Invention I. and Invention II are different methods and are therefore individual and distinct. Specifically, Invention I. is a method/ device for operating a cardiac rhythm management device comprising pacing the synchronized heart chamber at a pacing instant defined to occur prior to expiration of the escape interval by a specified offset interval, the escape interval based on both paced and sensed rate chamber signals, and Invention II. is a method for operating a cardiac rhythm management device comprising pacing the heart chamber in an asynchronous manner.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

The Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

The Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more

of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
